TECHNICAL DATA SHEETS

TECHNO TOTAL SOLUTIONS S.R.L

COMPANY

Techno Total Solutions srl *(**TTS**) is in the position to **offer technical and commercial advices in all the fields** in which bearings are employed. All **TTS** employees have a strong and consolidated experience in bearings related areas. This is basically the reason why they have decided to put together their knowledge and abilities – to give life to a company finalized to deliver cylindrical and spherical roller bearings of various types and dimensions applicable to complex industrial production environments as an alternative to very big companies not often willing to take care of customer needs and satisfaction.*

THE GOALS

***TTS** is strongly committed to totally fulfil customers expectations, to assure quality products and to keep on schedule with lead times. The company is an example of the typical small/medium italian firm. And the dimension is perfect to guarantee the mentioned services to a wide range of customers.*
***Dynamism and technical flexibility** give a great contribution in business development with representative customer companies in the iron and steel sector. Moreover they provide **TTS** new opportunities to enter industrial sectors unknown before.*

THE OFFERING

*Planning, production, assembly, testing and marketing of specific products are leading activities at **TTS**. The products are realised and assembled either at **TTS** plant or at highly qualified companies selected by **TTS** itself depending on the peculiarity of the items and the business needs. **TTS** also believes in the need of prompt replies to customers' technical questions and issues. **TTS** technical designers work side by side with the customers' technical departments in order to get the best out of the projects. The team work leads, of course, to customer satisfaction, and it also guarantees a remarkable improvement in the company know-how and experience. Moreover, a good team work between the customers and **TTS** people means an increase in the machines performance, a reduction in the machines downtime and a better project management.*

THE STAFF

***The technical team** structure is made of young specialised people, whose know-how in new technologies is very high and older people, whose main task is to support the others with the great experience achieved in years and years of work in the bearings sector.*
***The team of testers** is well trained to verify the quality of the bearings during the manufacturing phase and when the finished good is ready for the market. It is always ready to give suggestions to the production sector in order to assure continuous improvements. Whenever necessary, the people in the team are also available for inspections at customers plants for specific requirements and improvements.*
***The sales team** consists of motivated people in the position to face challenges in different areas and applications. It is specialised in the iron and steel industry – the core business of the company.*

Certifications

Our Company is ISO 9001-2015 (Bureau Veritas) certified to design and manifacture bearings for the Steel Industry.

ISO 9001-2008 | *2011, March 22*
ISO 9001-2015 | *2017, June 28 - Revision 2023, March 21*

High quality standards and accuracy of our products are guaranteed by careful management and inspection either of the inbound flow of raw material and the end products deriving from the manufacturing process.

Thanks to our powerful ERP system, the scheduling and the management of the bill of material to manufacture an end product is continuously monitored to guarantee fast and reliable deliveries to our customers.

We do strongly believe in the continuous improvement of the process and, for that reason, our staff is constantly up to date with the Lean Six Sigma methodologies.

Our continuous improvement projects are managed by certified personnel:

Six Sigma® GREEN BELT | *2016*
Six Sigma® BLACK BELT | *2017*

Furthermore we are on the way to get the ISO 14001 certification.

COMPETENZA GB GREENBELT 6 sigma GALGANO & ASSOCIATI

T.T.S. is committed to providing technical and commercial consulting services in all the areas where bearings are used.

T.T.S. members, whose professional ranks are the outcome of many years of experience in the bearings industry, have decided to gather their own know-how to supply special and standard bearings to small and large steel plants as an alternative to big, not flexible and often not focused on the customer satisfaction companies.

T.T.S. business comprises the design, the production, the testing and the selling of all its products; highly qualified companies that have overcome

T.T.S. severe selections are in charge of specific manufactures related to the product.

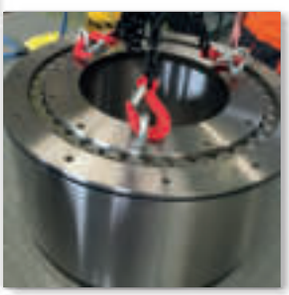
T.T.S. product range:
- Bearings and rollers for material handling and lifting Steel industry and metallurgy bearings
- Turbine bearings
- Bearings for painting lines
- Linear-motion and machine tool bearings
- TTS technical team can design bearings as per customer specific request

T.T.S. is a Six Sigma certified company
All its working environments have been organized applying the 5 s methodology.

T.T.S. is ISO 9001 certified
All the production phases are certified in accordance with the regulations in force and the respect of agreed deadlines is guaranteed.
Incoming/Outgoing goods control is a vital facet of ensuring product quality. TTS products are tested with qualified instrumentation in order to guarantee the repeatability and the conformity with the customer specifications.
The identification of the single components is also performed to guarantee the components traceability.
Specific testing certifications and quality certifications (as per customer request) can be provided together with the standard testing certifications.

BEARINGS FOR MATERIAL HANDLING SYSTEMS

Lifting systems undergo high static and dynamic loads, strokes and vibrations. **TTS** bearings are a warranty in terms of reliability and they do represent a great compromise between **quality and price**.

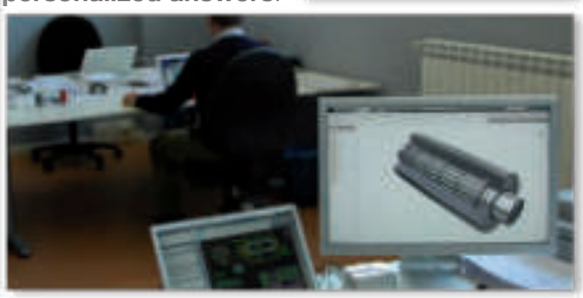


MACHINE TOOL BEARINGS

TTS helps you to improve **machine tools and spindles performances** with a wide range of solutions created to satisfy every application request and adjusted to the market needs, always maintaining **highprofessional and quality standards**.

BEARINGS FOR TENSION LEVELLERS

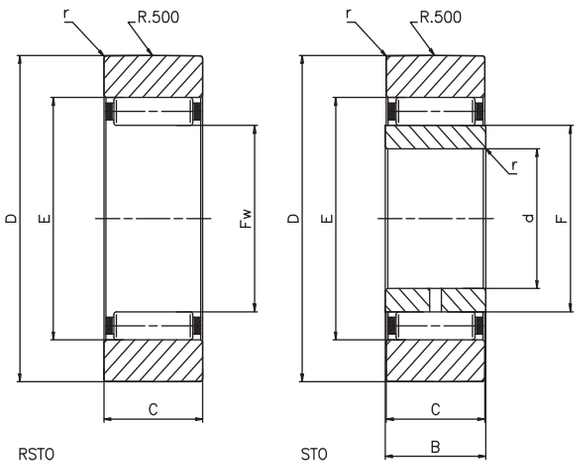
The easiest way to get high precision sheets, straps is the rollers leveller. **TTS offering fits any specific request with accurate personalized answers**.



STEEL INDUSTRY BEARINGS

Bearings undergo heavy loads, strokes and sudden changes in velocity. **TTS** makes huge designs efforts every day in order to improve the company know-how and supply long lasting bearings: maximizing performance and minimizing costs is our motto.

YOKE TYPE TRACK ROLLERS WITH SEPARABLE INNER RING
NEEDLE ROLLERS WITH CAGE



General specifications

Materials

Outer rings:
UNI 16CrNi4 steel case-hardened or equal
surface hardness 60±2 HRC
Inner rings:
UNI 100Cr6 steel hardened and tempered or equal
surface hardness 60±2 HRC
Cages:
In according to dimensions: polyamide reinforced with glass fibers, ribbon cage, massive steel cage "M" shaped.
Rolling elements:
UNI 100Cr6 steel hardened and tempered or equal
surface hardness 62±2 HRC

Tolerances:
In according to DIN 620

Dimensional and running accuracy:
In according to PN

Radial clearance:
Approximately CN, in according to DIN 620 - 4

Load ratings:
In according to ISO 76 e ISO 281

Standard outer crown R.500. Optimized TTS profile on request
To order bearing with cylindrical outer profile use /X sufix

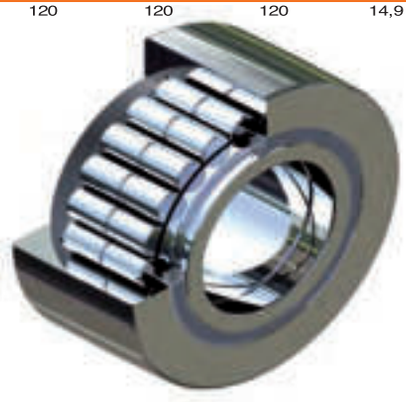
1) Tolerance of rounded outer diameter D= 0/-0,050
2) Width tolerance B= h12
3) Max. operating speed with grease lubrication

Some application fields:
- general handling

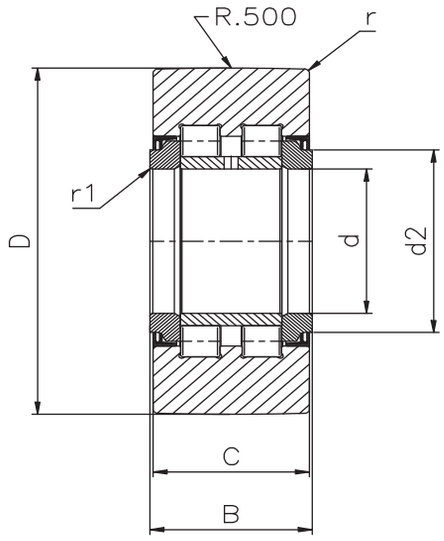
Alternative design:
- track rollers for low temperatures aplications and for high temperture apl.
- track rollers employed in corrosive environments
- **in according to customer drawing**



YOKE TYPE TRACK ROLLERS WITH AXIAL SHOULDER
FULL COMPLEMENT OF CYLINDRICAL ROLLERS

Sheet n°

2006



General specifications

Materials
Outer rings:
UNI 16CrNi4 steel case-hardened or equal
surface hardness 60±2 HRC
Inner rings:
UNI 100Cr6 steel hardened and tempered or equal
surface hardness 60±2 HRC
Washers:
UNI 16CrNi4 steel case-hardened or equal
surface hardness 60±2 HRC
Rolling elements:
UNI 100Cr6 steel hardened and tempered or equal
surface hardness 62±2 HRC

Tolerances:
In according to DIN 620

Dimensional and running accuracy:
In according to PN

Radial clearance:
Approximately C2, in according to DIN 620 - 4

Load ratings:
In according to ISO 76 e ISO 281

To order bearing with plastic sliding block use /F sufix

1) Conical profile

2) Axial displacement can be made by means of packing rings, available dimensions 0,5 and 1 mm

Some application fields:
- forklift (mast roller)
- general handling

Alternative design:
- bearings for low temperatures aplications and for high temperture apl.
- bearings employed in corrosive environments
- **in according to customer drawing**

COMBINED BEARINGS FOR STEEL SECTION ADJUSTABLE BY MEANS OF SCREW

Sheet n°

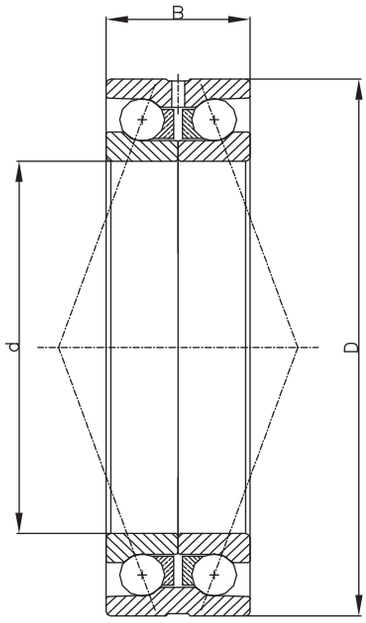
HIGH DIMENSIONS
DOUBLE ROW ANGULAR CONTACT BALL BEARINGS

Sheet n°

4005



Product description
The main peculiarity of the angular contact ball bearing consists in the slightly different positions of the internal and external bearing raceways (they do not share the same axle). This particular configuration is typically advised for combined loads when radial and axial loads act at the same time.
The double row angular contact ball bearing can be seen as two angular contact ball bearings with an O-configuration setup or an X-configuration setup. It can support radial and axial loads with an axial load from both sides. It is narrower than a couple of angular contact ball bearings.

Some application fields:
- rolling mill, finishing rolls
- machine tools, vertical lathes

Alternative design:
- for low temperatures aplications and for high temperature aplications
- with seals or with protection shields
- employed in corrosive environments
- **in according to customer drawing**

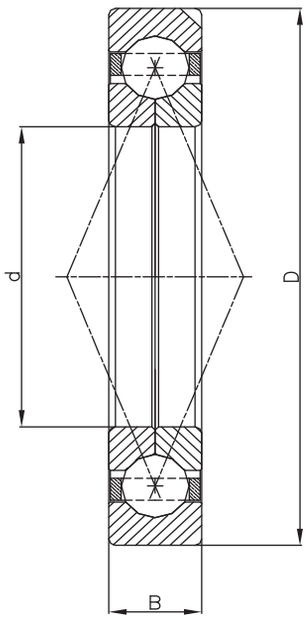
HIGH DIMENSIONS
FOUR-POINT CONTACT BALL BEARINGS

Sheet n°

4006



Product description
Single row bearing with two inner rings and one outer ring. The raceways are designed to support an axial load from both sides by themselves.
It is smaller than the double row angular contact ball bearings along the axial direction.
Typically its contact angle is equal to 35° or 45° and the inner ring is made up of two parts.
A large load carrying capacity due to the high number of balls is the trademark of this type of bearing.
The two inner semi-rings and the outer ring together with the cage/balls group can be separately assembled.

Some application fields:
- rolling mill, finishing rolls
- machine tools, vertical lathes

Alternative design:
- with dimensional and running accuracy better than standard
- with clearance different than standard
- for low temperature aplications and for high temperature aplications
- with seals or with protection shields
- employed in corrosive environments
- **in according to customer drawing**

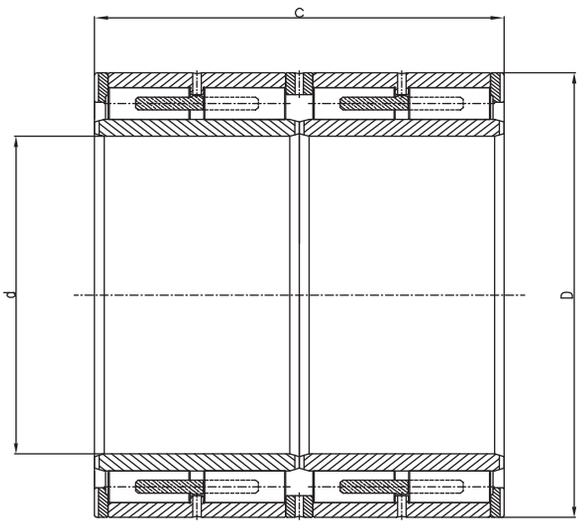
MULTIROW CYLINDRICAL ROLLER BEARINGS

Sheet n°

4011



Product description
Typically used in the necks of the rolls in rolling mills, calenders, roller presses.
Its peculiarity is a lower coefficient of friction.
It is highly recommended in high-speed rolling mills due to the fact that it is normally assembled with interference fit.
The reduced radial footprint of this bearing allows the use of high diameter necks with respect to the rolling cylinder diameter.

Some application fields:
- rolling mill, roll necks
- roller presses
- plate bending machine

Alternative design:
- with ring and rollers in case hardening steel
- with clearance different than standard
- with tapered bore
- with grooves on rings faces
- with helical grooves in the bore
- for low temperatures applications and for high temperature applications
- with seal rings
- **in according to customer drawing**

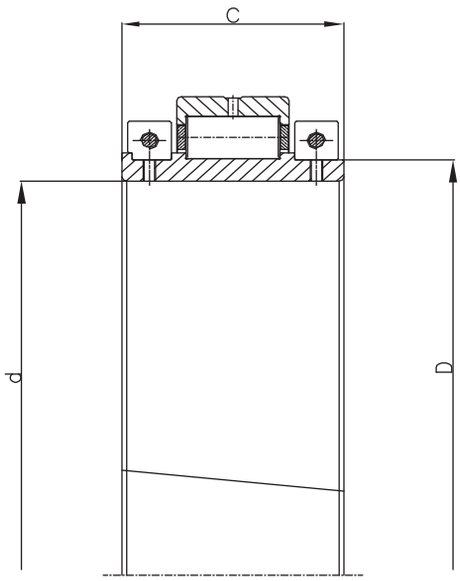
HIGH DIMENSIONS
SPLITTED RADIAL CYLINDRICAL ROLLER BEARINGS

Sheet n°

4018



Product description
Mainly used in the case of poor accessibility or not straight shafts.

Its use is advised whenever the maintenance or the replacement in the case of the traditional bearings would be too time consuming and expensive. The typical applications for this type of bearing are the pilgrim step type rolling mills, the crankshafts, the cup-wheel excavators, the rolling mill spindles and the huge ventilation devices.

Some application fields:
- pilger mill
- crankshaf
- bucket wheel excavators
- supports for intermediate ship axis

Alternative design:
- with ring and roller in case hardening steel
- with dimensional and running accuracy better than standard
- with clearance different than standard
- for low temperatures applications and for high temperature applications
- with seals or with protection shields
- **in according to customer drawing**

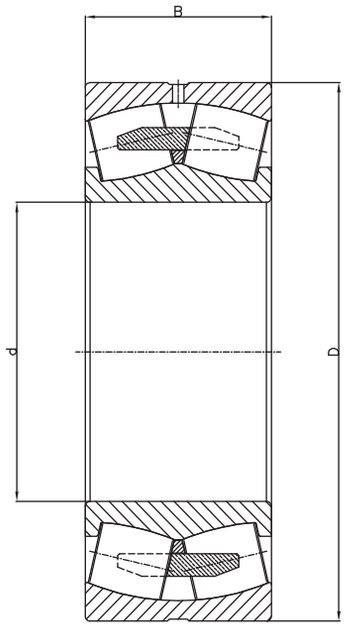
HIGH DIMENSIONSRADIAL
RADIAL SPHERICAL ROLLER BEARINGS

Sheet n°

4020



Product description
Double row bearing with one spherical raceway on the outer ring and 2 raceways on the inner ring.
The two raceways on the inner ring have a certain tilt with respect to the axle. For this reason this type of bearing neither does feel the effects of the shaft alignment errors with respect to the cage nor the effects of any possible sags in the shaft.
It can support radial and axial loads with an axial load from both sides.

Some application fields:
- steel industry
- mineral and construction industries, wheel crane
- paper mill

Alternative design:
- with dimensional and running accuracy better than standard
- with clearance different than standard
- with tapered bore
- with adapter sleeves or with withdrawal sleeves
- with helical grooves in the bore
- for low temperatures applications and for high temperature applications
- with seals or with protection shields
- employed in corrosive environments
- for vibratory applications (vedi scheda cod. 8012)
- **in according to customer drawing**

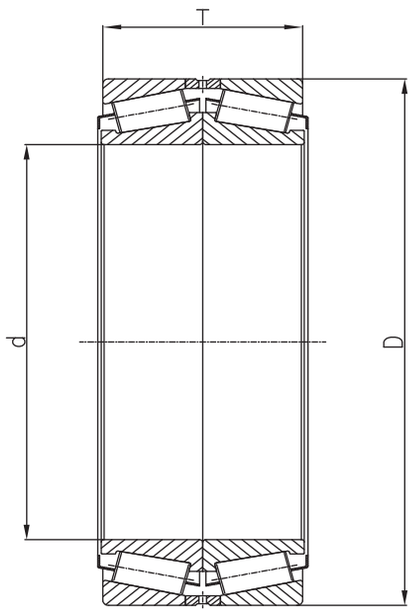
HIGH DIMENSIONS
PAIRED SINGLE ROW TAPERED ROLLER BEARINGS

Sheet n°

4023



Product description
The paired single row tapered roller bearing does guarantee economic solutions and great convenience from the maintenance and assembling point of view.
The single row tapered roller bearing can be paired with an O-configuration or an X-configuration setup.
The X-configuration setup, in which the action lines of the load converge in the bearings axle, is favourable when the bearing must bear axial loads with the axial load acting in both the axial directions. In this case the load will be supported by only one bearing at a time.
The O-configuration setup, in which the action lines of the load diverge from the bearing axle, is also favourable when the bearing must support an axial load from both sides.

Some application fields:
- gear reducer
- machine tolls, mandrel
- handling, roller support
- mining industry, axial sliding rollers

Alternative design:
- with ring and roller made of case hardening steel
- with seals or with protection shields
- **in according to customer drawing**

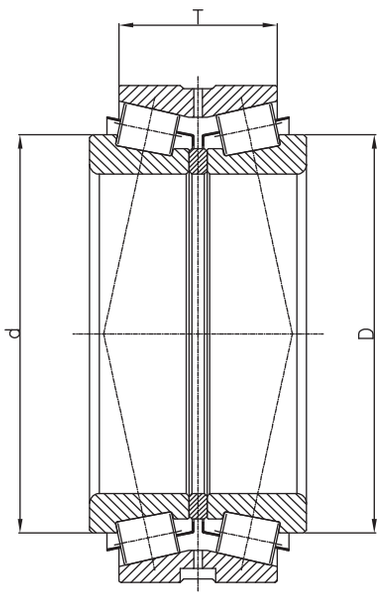
HIGH DIMENSIONS
DOUBLE ROW TAPERED ROLLER BEARINGS

Sheet n°

4024



Product description
Typically a very rigid bearing, it can support heavy combined loads. It can tie the shaft in the two directions with a certain axial play or a certain preload.
This type of bearing is mainly used in the reducers for lifting devices, in the rolling mills and in the mining processing machinery like tunnel digging machines.

Some application fields:
- gear reducer
- rolling mill
- lifting devices
- mining industry

Alternative design:
- with ring and roller in case hardening steel
- with tapered bore
- with grooves on rings faces
- with helical grooves in the bore
- with seals or with protection shields

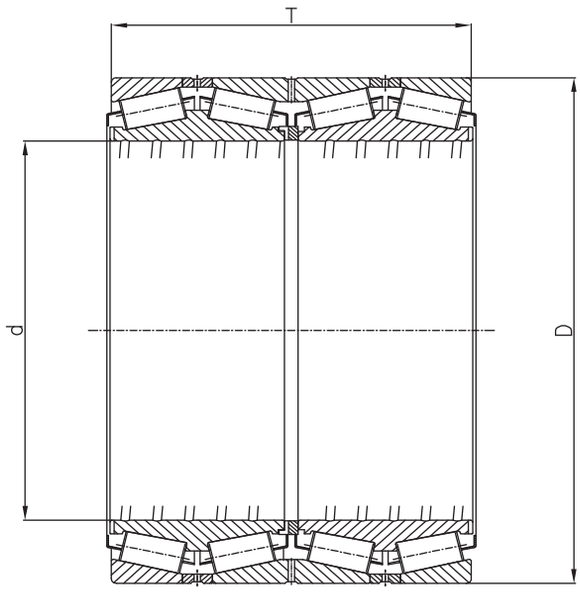
MULTIROW TAPERED ROLLER BEARINGS

Sheet n°

4025



Product description
Typically used in the rolling mills when the rolling speed is low or moderate.
This type of bearing can support radial and axial loads and it usually does not require the use of thrust bearings; the necks can therefore be relatively short and the cranckset can be the same in both sides.

Some application fields:
- rolling mill, roll necks

Alternative design:
- with ring and roller made of case hardening steel
- with dimensional and running accuracy better than standard
- with clearance different than standard
- with tapered bore
- with grooves on rings faces
- with helical grooves in the bore
- for low temperatures applications and for high temperature app.
- with seal rings

HIGH DIMENSIONS
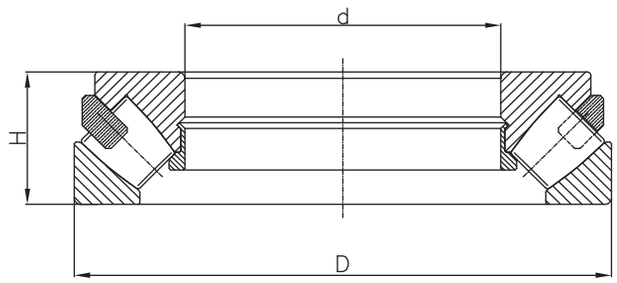
SPHERICAL ROLLER THRUST BEARINGS

Sheet n°

4034



Product description
This type of bearing is characterized by a center alignment angle that permits the transmission of the load from one raceway to the other. It can, therefore, simultaneously support a radial and an axial load. It is steerable and, for this reason, it does not feel either the effect of a flection of the shaft or any mismatch between the position of the shaft and its cage .

Some application fields:
- mining industry, tower crane
- forging
- supports for intermediate ship axis

Alternative executions:
- with dimensional and running accuracy better than standard

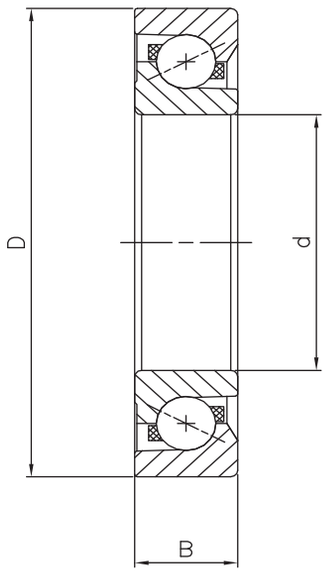
HIGH PRECISION
SINGLE ROW ANGULAR CONTACT BALL BEARINGS

Sheet n°

6010



Product desciption
Typically a high precision bearing with particular build specifications from the contact geometry to the surface configuration; it gives the mandrel an excellent rotation ability, high precision, high stiffness and a good vibration behaviour.
This type of bearing has been especially developed to support recirculating ball-screw.

Some application fields:
- machine tools
- paper industry
- woodworking
- patterns turbines

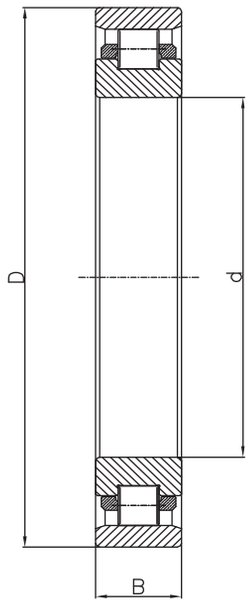
HIGH PRECISON
SINGLE ROW CYLINDRICAL ROLLER BEARINGS

Sheet n°

6013



Product description
This type of bearing can simultaneously support heavy radial loads and high-speed.
The configuration of the rib differentiates one bearing from the other.

Typically the cylindrical rollers reside in the raceway between the ribs on one of the rings.

This particular configuration results in a better lubrication, a lower coefficient of friction and, therefore, a lower operating temperature.

Some application fields:
- machine tools
- textile industry
- woodworking
- patterns turbine

Alternative design:
- with tapered bore
- hybrid
- with rings and rollers made of creep resistant steel
- with seals or with protection shields
- **in according to customer drawing**

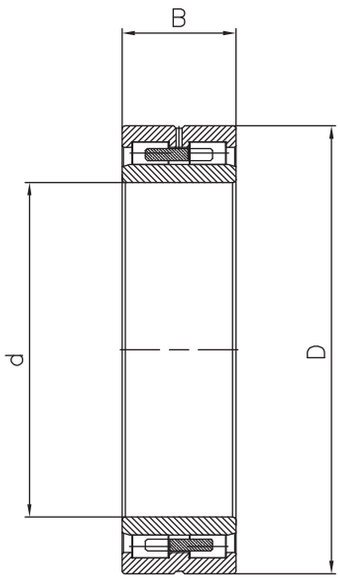
HIGH PRECISION
DOUBLE ROW CYLINDRICAL ROLLER BEARINGS

Sheet n°

6014



Product description
This type of bearing is characterized by a thin cross section, a large load carrying capacity and a high stiffness. These peculiarities make the bearing suitable for the use in machine tools, rolling mills, calendars, grinding mills and big reducers.
The ring with the ribs, the cage and the rollers can be separately assembled from the other ring. Or, even better, every single component can be separately assembled making the assembling, the maintenance and the inspection procedures faster and easier.

Some application fields:
- machine tools
- textile industry
- woodworking
- patterns turbines

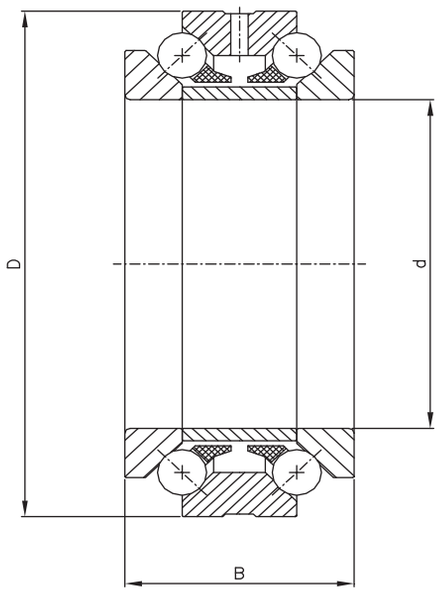
HIGH PRECISION
DOUBLE DIRECTION ANGULAR CONTACT BALL BEARING

Sheet n°

6016



Product description
This type of bearing is made up of an upper component with a larger load carrying capacity and a lower smaller component locked to the machine. The two components are assembled together as a single unit.
Typically characterized by a reduced height it is advised for combined loads when radial and axial loads act at the same time. It can also support (turn-over) tilting moments; only one bearing is, therefore, necessary to hold the rotating and the fastened components of the machine.
Every single component of the bearing can be separately assembled making the assembling, the maintenance and the inspection procedures faster and easier.

Some application fields:
- machine tools

Alternative design:
- in according to customer drawing

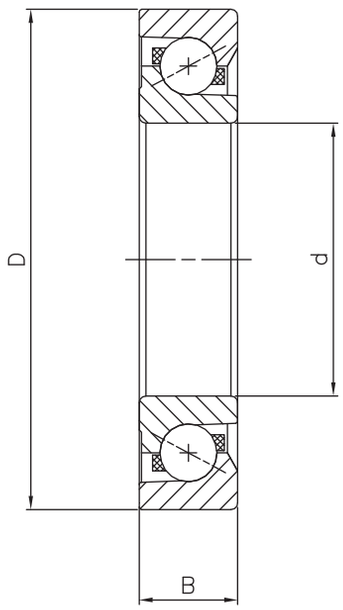
SINGLE ROW ANGULAR CONTACT BALL BEARING FOR RECIRCULATING BALL-SCREW

Sheet n°

6020



Product description

This type of bearing has been especially developed to support recirculating ball-screws.
It offers high precision and stiffness, a low coefficient of friction, high rotational speed during quick positional shifts.

Some application fields:

- machine tools, recirculating ball-screws

Alternative design:

- with integrated fixing flange
- with seals or with protection shields
- **in according to customer drawing**

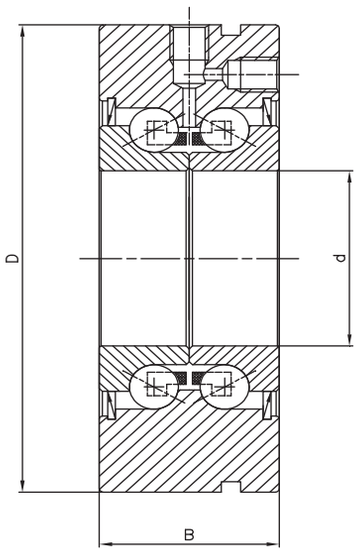
HIGH PRECISION DOUBLE ROW ANGULAR CONTACT BALL BEARINGS FOR RECIRCULATING BALL-SCREWS

Sheet n°

6022



Product description
This type of bearing has been especially developed to support recirculating ball-screws.
It offers high precision and stiffness, a low coefficient of friction, high rotational speed during quick positional shifts.

Typically made up of an outer ring in one piece, an inner ring in two pieces, ball rows and seals it is a bi-directional bearing with a 60° pressure angle and an O-configuration setup.
It can support radial and axial loads with an axial load from both sides; it must be preloaded with a locknut during the assembly.

Some application fields:
- machine tools, recirculating ball-screws

Alternative design:
- with integrated fixing flange
- with seals or with protection shields
- **in according to customer drawing**

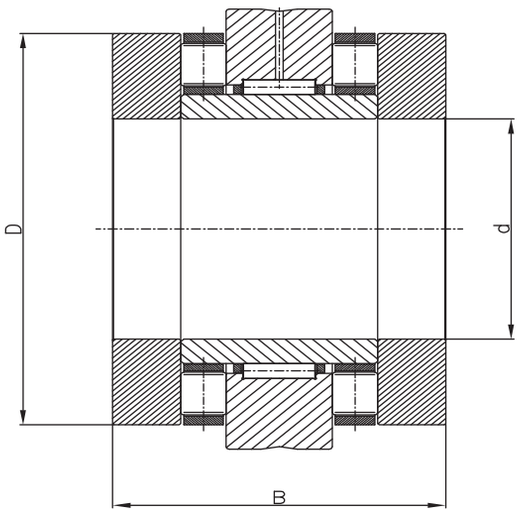
HIGH PRECISION
NEEDLE ROLLER/AXIAL CYLINDRICAL ROLLER BEARINGS

Sheet n°
6030



Product description
Typically made up of a double direction axial cylindrical roller bearing and a driving radial needle roller bearing.
This type of bearing is used in the transmission of high axial loads and when the axial positioning must be very precise (recirculating ball-screws) It is also available with an outer flanged ring to make the assembly of the bearing to the machine easier.

Some applications fields:
- machine tools, recirculating ball-screws

Alternative design:
- with integrated fixing flange
- with seal housing washer
- **in according to customer drawing**

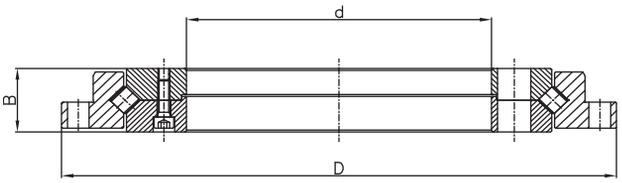
HIGH PRECISION
CROSSED ROLLER BEARINGS

Sheet n°

6037



Product description
This type of bearing is made up of rolling elements with an X arrangement in which every rolling element is perpendicular with respect to the adjacent one. The rolling elements are positioned in a grinded raceway with a 90° V profile and they are separated by plastic spacers.
Due to this particular setup the bearing can support radial and axial loads with an axial load from both sides and tilting moments. It is also characterized by high stiffness because of the hardness of the inner and outer rings.
It is mainly used in specific applications such as hinged joints and industrial robots rotating units (anthropomorphic robots), machine tool rotary tables, medical devices, measuring machines, semiconductor production equipment.

Some application fields:
- machine tools, positioning and rotary planes
- handling, joint of the robot

Alternative design:
- full complement
- with integrated fixing flange
- **in according to costumer drawing**

SLEWING BEARINGS

Sheet n°

7003

Product description

This type of bearing comprises of an inner and outer ring, one of which usually incorporates a gear.The attachment holes in both the rings helps for a quick and optimized transmission between the adjacent connected machine components. This bearing can accommodate loads acting singly or in combination or in any direction. The optimum design of the raceway along with the rolling elements, spacers, sealing systems and lubrication guarantees the required motion precision, the operational parameters and the required life.

External surface protection treatments can also be done to provide high level of reliability,rating life and security again premature damage such as fatigue in the raceway and surface corrosion.

Some applications:
- Tower cranes,Tunnelling machines,Excavators,
- Wind turbines, Rotating tables,Roller conveyors

Alternative designs:
- Four- point contact ball bearing
- Eight-point contact ball bearing
- Crossed cylindrical roller bearing
- Triple row roller bearing
- Roller/Ball combination bearing
- **in accordance to costumer drawing**

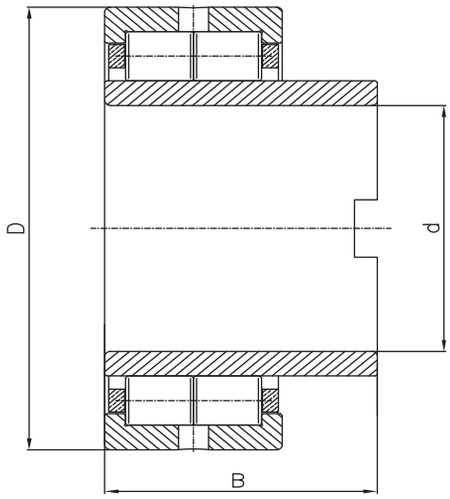
ROLLER BEARINGS
WITH UNCONSTRAINED AXIAL DISPLACEMENT ABILITY

Sheet n°

8004



Product description
Typically a roller bearing with a longer than usual inner ring and with an axial displacement ability.
This type of bearing can support large radial loads, axial expansions of the shaft and it guarantees a high rotation precision.
It is mainly used in paper machines.

Some application fields:
- paper machine

Alternative design:
- for low temperatures applications and for high temperature applications
- employed in corrosive environments
- **in according to customer drawing**

Product range	mm	mm	mm
	d	D	B

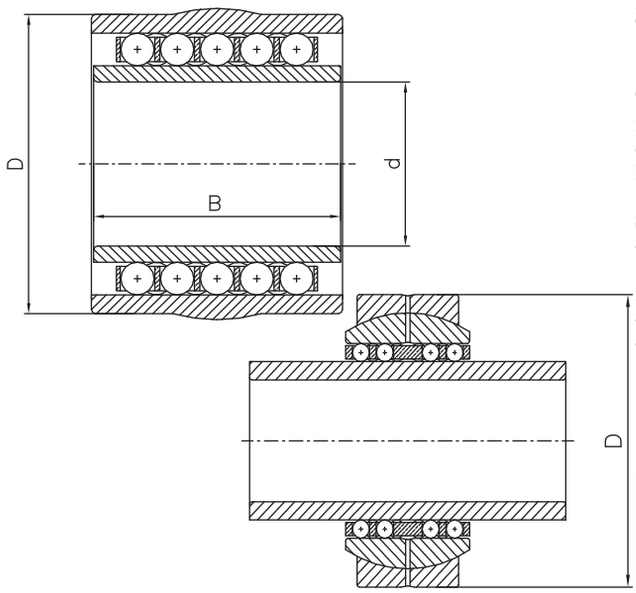
MULTIROW BALL BEARINGS WITH AN EXTERNAL SPHERICAL SURFACE

Sheet n°

8005



Product description
Typically a multirow ball bearing. The rows are stored in a solid brass or light alloy cage in which the inner and outer raceways have a cylindrical shape in order to compensate any occasional axial expansions of the shaft. The external surface is spherical to offset any possible initial misalignments and it can be provided with a self-aligning outer ring (rod end).
It is mainly used in paper machines.

Some application fields:
- paper machine

Alternative delivery:
- for low temperatures applications and for high temperature
- employed in corrosive environments
- **in according to customer drawing**

Product range	mm	mm	mm

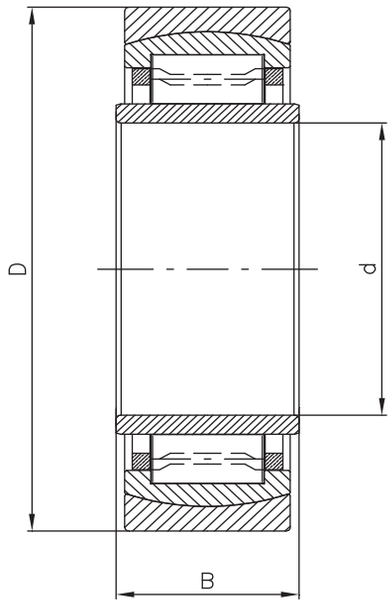
SELF-ALIGNING RADIAL ROLLER BEARING

Sheet n°

8006



Product description
This type of bearing consists of one removable inner ring (to offset a possible axial expansion of the shaft), one spherical intermediate ring (to offset any possible initial misalignments) and one self-aligning outer ring (spherical joint).
It is mainly used in paper machines.

Some application fields:
- steel industry, continuous melt
- paper machine, drying cylinders

Alternative design:
- low temperatures applications and for high temperature
- employed in corrosive environments
- **in according to customer drawing**

Product range	mm	mm	mm
	d	D	B

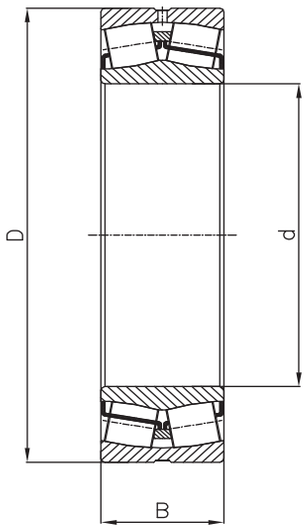
SPHERICAL ROLLER BEARINGS FOR VIBRANTING SCREENS

Sheet n°

8012



Product description
This type of bearing consists of two rows of rollers and one spherical raceway on the outer ring. It is provided with special internal geometries, finishing and clearances suitable for vibrating screens.
The two raceways on the inner ring have a certain tilt with respect to the axle. For this reason this type of bearing neither does feel the effects of the shaft alignment errors with respect to the cage nor the effects of any possible sags in the shaft.
It can support radial and axial loads with an axial load from both sides.

Some application fields:
- steel industry, vibrating screens
- gruppi di trasmissione, planetary gears
- mineral and construction industries, compactors
- transportation, bushings railway

Alternative design:
- with tapered bore
- for low temperatures applications and for high temperature
- employed in corrosive environments
- **in according to customer drawing**

Some application fields:
- levellers

Alternative design:
- for low temperatures applications and for high temperature
- employed in corrosive environments
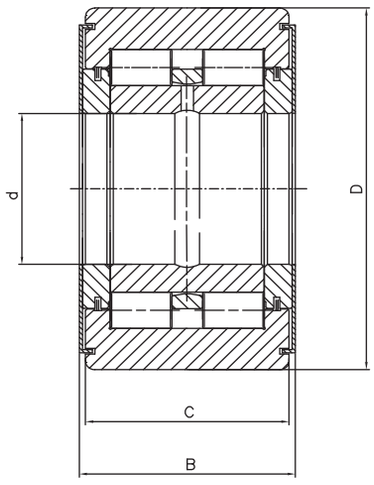
- **in according to customer drawing**

BACK-UP ROLLERS



General specifications

Materials
Outer rings:
UNI 100Cr6 steel or equivalent hardened and tempered
surface hardness 60±2 HRC
Inner rings:
UNI 100Cr6 steel or equivalent hardened and tempered
surface hardness 60±2 HRC
Washers:
UNI 16CrNi4 or equal steel case-hardened
surface hardness 60±2 HRC
Rolling elements:
UNI 100Cr6 steel or equivalent hardened and tempered
surface hardness 62±2 HRC
Tolerances:
According to DIN 620

Precision class:
According to P6

Radial clearance:
Approximately CN, according to DIN 620

Load ratings:
According to ISO 76 and ISO 281

Code	Dimensions				Load ratings		Rotation Speed

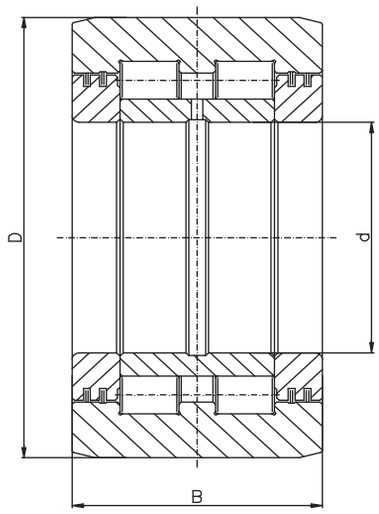
TRACK ROLLERS

Sheet n°

8030



Product description
This type of radial roller bearing is used in steel processing industry as a track roller for any type of handlings.
Its dimensions, shape, and performance are not subjected to any standardizations; the bearing is designed and produced under customer's specifications

Some apllication fields:
- steel industry, sintering plan

Alternative design:
- in according to customer drawing

Product range	mm	mm	mm
	d	D	B
Min. Value	50	110	32
Max. Value	180	500	230

General specifications

Materials
Outer rings:
UNI 18NiCrMo5 or equal steel case-hardened
surface hardness 60±2 HRC

Inner rings:
UNI 100Cr6 steel or equivalent hardened and tempered
surface hardness 60±2 HRC

Rolling elements:
UNI 100Cr6 steel or equivalent hardened and tempered
surface hardness 62±2 HRC

Dimensions:
For info contact TTS technical department

Dimensional accuracy:
For info contact TTS technical department

Running accuracy:
For info contact TTS technical department

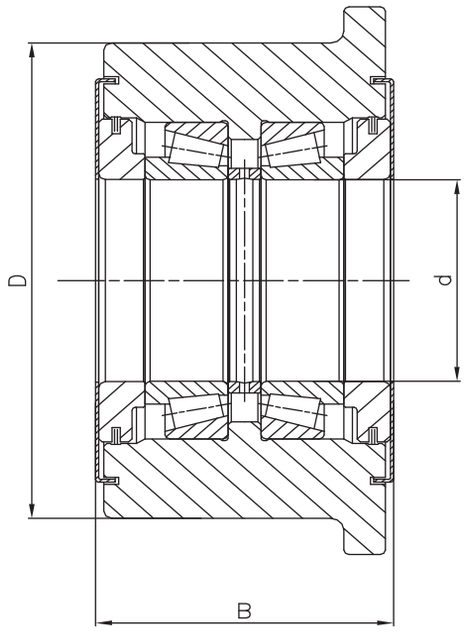
Radial clearance:
For info contact TTS technical department

Laod rating:
in according to UNI ISO 76:1995 and UNI ISO 381:1995

TRACK ROLLERS

Sheet n°

8031



Product description
This type of radial roller bearing is used in steel processing industry as a track roller for any type of handlings.
Its dimensions, shape, and performance are not subjected to any standardizations; the bearing is designed and produced under customer's specifications

TRACK ROLLERS

Sheet n°

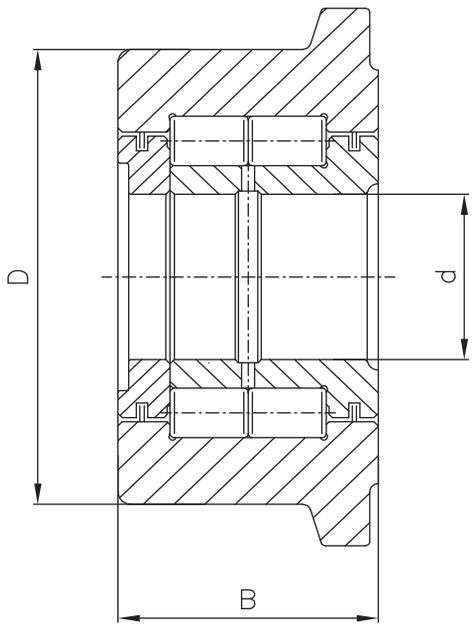
8032



Product description
This type of radial roller bearing is used in steel processing industry as a track roller for any type of handlings.
Its dimensions, shape, and performance are not subjected to any standardizations; the bearing is designed and produced under customer's specifications.

Some spplication fields:
- rolling mill, coils handling

Alternative executions:
- in according to costumer drawing
